LETTER OF RECOMMENDATION

for Bogdan Panov

To whom it may concern,

I am a Lead Developer at BoomBit, a Polish video game development and publishing company. Bogdan worked for over half of a year in one of our production teams which I had supervised.

As a Unity Developer, he was mostly responsible for migrating features from our previous game, reskinning the user interface, adding visual effects in the gameplay, fixing bugs, implementing various feedback and occasionally polishing new features. As a person he is kind and hard-working. He is also a good teammate.

Bogdan is a very passionate and motivated game developer. Additionally, his area of interest goes beyond games and relates to other IT fields like electronics as well. He was always eager to learn new things and very appreciated the feedback received from more experienced developers. He was open to discover new areas of game development in which he didn't have experience yet. These features had made him a really good prospect and I believe he can develop further.

Sincerely,
Dominik Pielak
Lead Developer at Boombit
